*** Yay! VSS is much more developed than AMI and you have a really solid structure here that is also visually appealing! The changes are small.***

Issues:

Entire site: Contact us is not needed on every page
IDK if the checkboxes are the best use for showing which each category can do (it makes me feel like I can uncheck them - maybe thats just me)
Logos are pretty big (ex: storage page & footer)
Theres a lot of repeat (structures/construction & erection, storage solutions/ material handling & storage, Tools & kitting)

Home: On the “Procurement & Integrated logistics” section there are 6 clickable items (safety, MRO, etc.) however, the pictures are all the same and don’t show what the items actually are

FT Equiv Personnel: Change “Service” to “Services”
The description is a little weird sounding... maybe it is because the word “need” is used 3 times in the same sentence.

Tools & Kitting: The contact us page is before all the discriptions which is unlike the other pages (normally the “contact us” is the last thing we see when the page ends so I originally thought the page ended and turns out theres a lot more info here).

Marketing: This seems like it should be under downloads?

Our History: This could be just my computer for some reason but when I click this I get a red warning screen that says “Deceptive site ahead - attackers on www.mylesburke.net may trick you into doing something dangerous”

Footer: Logos could be smaller or grouped into an about us link or even not exist.
I think footer could be smaller or just slightly more organized

Ideas to consider:

Safes?

Our Process?

Our Team?

Specialties/extra side services?

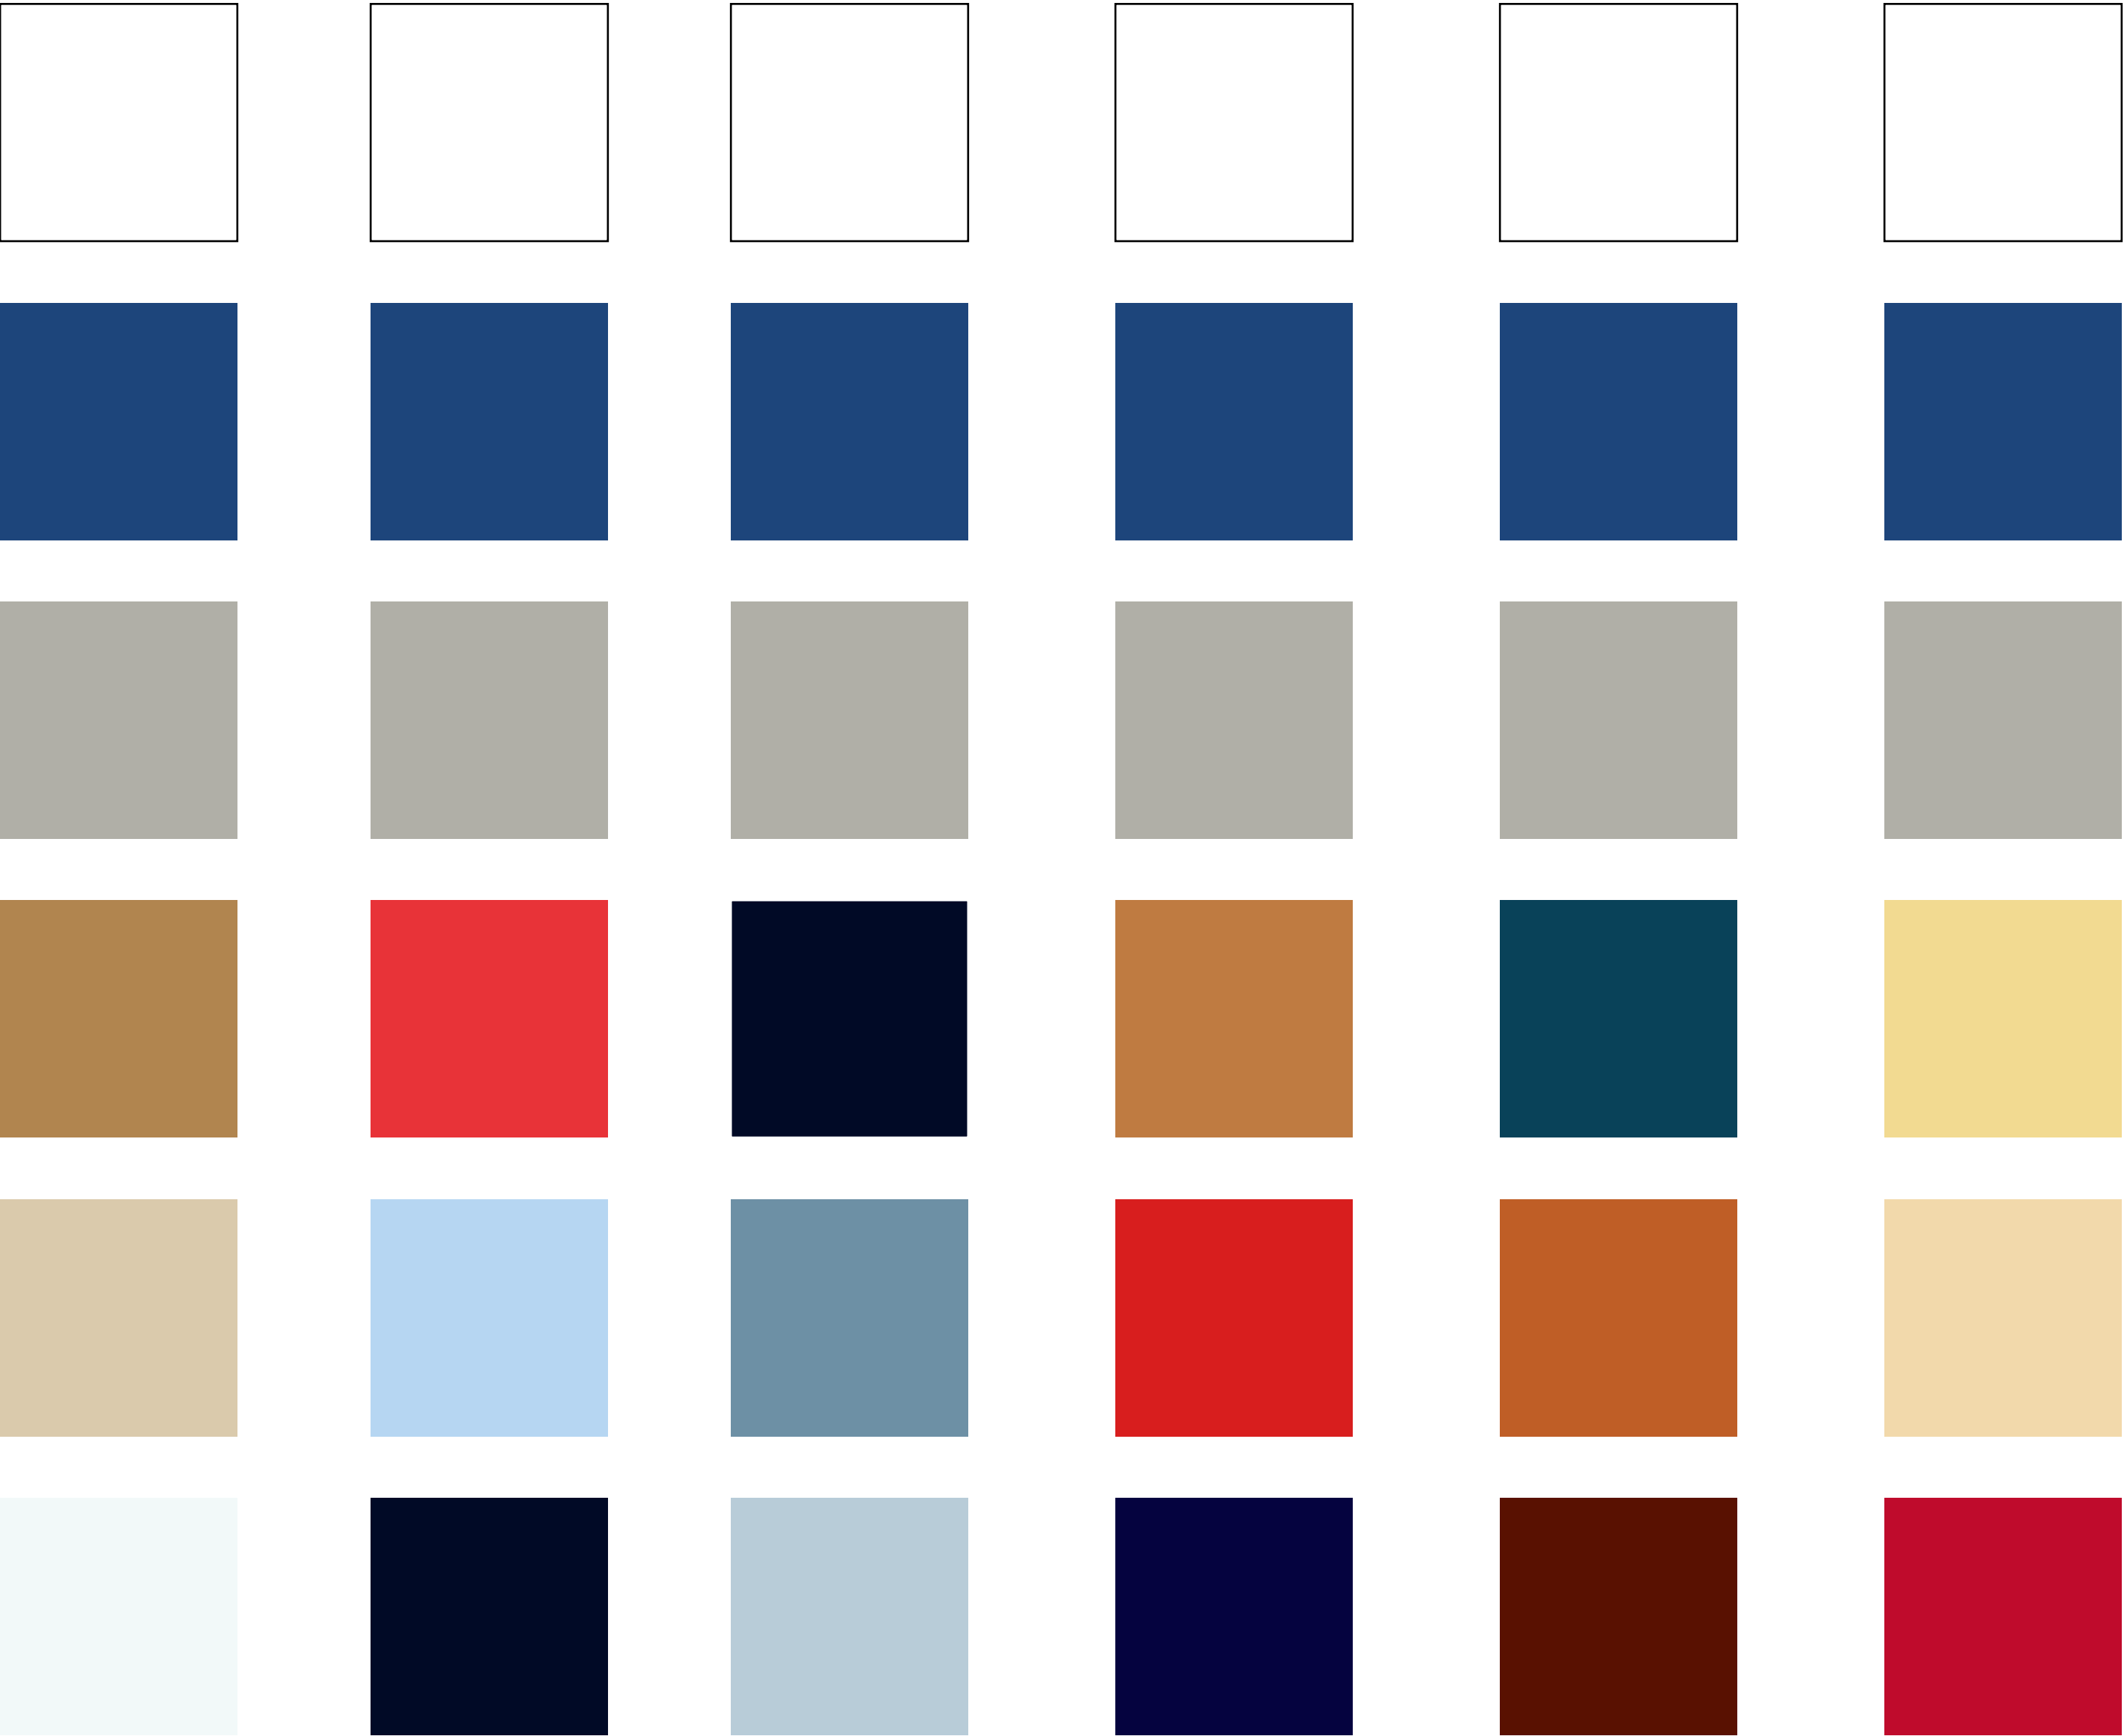

Mission/capabilities statement/ why choose AMI as a partner?

Newsletter?

Request a proposal/estimate?

Careers?

Terminology/Education?

All the same
